

TRAINING COURSE OUTLINE

www.radtac.co.uk

PRINCE2 Overview – 1 Day

Businesses are undergoing change at an unprecedented rate which shows no signs of abatement, and Projects are the vehicle for implementing such change. The benefits of using structured methods for Project Management have long been recognised, especially in the systems development arena. Now other areas of the business are realising that a more disciplined approach can help ensure that projects add value to the business as planned.

PRINCE2™ is the recognised de facto standard project management method, being used extensively both in the UK and internationally. This overview provides an insight into the content and structure of this project management method and explains how the principles that underpin the method can be applied in any project environment.

Audience

This course will benefit anyone who wishes to gain a clear understanding of the background, structure and applicability of the PRINCE2™ method.

Content
