Using PRINCE2 with DSDM – 2 Days

DSDM (Dynamic Systems Development Method) is a well established and popular Agile method. DSDM fits well alongside traditional methods and increasingly, organisations that use PRINCE2 and similar ‘traditional’ approaches to Project Management are seeking to achieve the benefits available from employing DSDM.

It may at first appear that there is an incompatibility between DSDM and PRINCE2 (and similar traditional methods) – and it is true that using them together is not straightforward. However the potential benefits are huge, and when approached properly the issues can be addressed and can be resolved in a way that builds on the strengths of both.

This training course examines the issues, risks and benefits of implementing DSDM alongside traditional PRINCE2 methods, and presents options and proven solutions through examination of the implications and practical Case Studies.

Audience

This course will benefit anyone with an interest in recognising the benefits of using DSDM with PRINCE2 or ‘traditional’ Project Management. Attendees will include Project Managers and team members from both Agile and Traditional projects, Project Sponsors and other Project Board members, Project Assurance and Project Support personnel and those responsible for or considering the introduction of a more Agile approach into a non-Agile environment.

Content

- PRINCE2 and DSDM philosophies, synergies and tensions
- DSDM PRINCE2 Project Organisation
- Directing a DSDM Project and the role of the Project Board
- DSDM Project Start-up, Initiation and the PID
- The role of the Business Case on a DSDM project
- Planning and Control of DSDM projects, releases, Timeboxes and iterations
- DSDM Risk Management
- Managing DSDM Project Stage Boundaries
- DSDM Configuration Management and Change Control
- DSDM Project Management Products and DSDM Project Reporting
- DSDM Project Tolerance and Managing DSDM Product Delivery
- Assurance of a DSDM project
- Quality in a DSDM Project Environment
- Integration and transitioning to DSDM

Additional Details

Duration 2 days

Setup Laptop projection; flip charts; space for groups of three or four to work together in comfort.
